

Website Hosting - Bug #122

ALT Project Management Web Service Crash

06/12/2013 10:44 AM - Daniel Curtis

Status:	Closed	Start date:	06/12/2013
Priority:	Normal	Due date:	
Assignee:	Daniel Curtis	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:		Spent time:	2.00 hours
Description			
<p>During the upgrade of the web2 server to Debian Wheezy a few packages were upgraded, and broke dependencies with the ALT PM Redmine instance.</p> <p>The initial error stated that a required package was not installed, bundler.</p> <pre>sudo apt-get install bundler</pre> <p>I then began experiencing gem dependency issues. To resolve the dependency issues:</p> <pre>gem install rails --include-dependencies gem install rack -v 1.0.1 gem install multi_json -v 1.7.2 gem install builder -v 3.0.0 gem install hike -v 1.2.2 gem install tilt -v 1.4.0 gem install treetop -v 1.4.12 gem install mail -v 2.5.3 gem install coderay -v 1.0.9 gem install json -v 1.7.7 gem install rdoc -v 3.12.2 gem install jquery-rails -v 2.0.3 gem install mysql2 -v 0.3.11 gem install net-ldap -v 0.3.1 gem install ruby-openid -v 2.1.8 gem install rack-openid -v 1.3.1 apt-get install libmagick9-dev graphicsmagick-libmagick-dev-compat libmagickcore-dev libmagickwand-dev gem install rmagick -v 2.13.2</pre>
