<b>Description</b>			
<p>During the initial setup of the development environment I needed to setup the prototyping and virtual breadboard program called Fritzing. Luckily the program is included in the Ubuntu software repositories, so to install it was simple. Just run:</p>			
<pre>sudo apt-get update sudo apt-get install fritzing</pre>			
<p>Note: I did encounter one small problem after installing where I would get a pop up saying!</p>			
<p>Sorry, we have a problem with the swapping mechanism. Fritzing still works, but you won't be able to change parts properties.</p>			
<p>This was simple to fix by installing the following package:</p>			
<pre>sudo apt-get install libqt4-sql-sqlite</pre>			
<p>Fritzing is now ready for use.</p>
