FreeBSD Administration - Bug #483

Apache24 Error During SSL Handshake With Remote Server

11/29/2014 06:52 AM - Daniel Curtis

Status:	Closed		**Start date:**	11/29/2014
Priority:	Normal		**Due date:**

Target version:	FreeBSD 9		**Spent time:**	1.00 hour

Description

While setting up a proxy within Apache24 I kept getting an error every time I tried to access the site served from the server. In the case of Apache 2.4 and up, there are different defaults and a new directive.

I had to add the following directives to get it working:

```
SSLProxyEngine on
SSLProxyVerify none
SSLProxyCheckPeerCN off
SSLProxyCheckPeerName off
```

NOTE: This problem was only noticeable after I moved the website served from to a new server with a different host name than what was on the SSL certificate. The above directives disables the host name checking.
