Target version:	Windows 7	Spent time:	0.00 hour

Description

The Intuit Interchange Format, IIF, is a proprietary format that is based on CSV. As such they are backward compatible with most any program that can read CSV. This is done simply by changing the file extension from .iif to .xls or .csv accordingly.

NOTE: If the extension is not displayed, you may have to enable/disable an option in Folder Options, found either in the menu or Control Panel depending on which version of Windows is running.

History
