| Target version: | Magento 1.9 | Spent time: | 1.50 hour |
| Description | | | |
| <p>This is a guide for creating a theme from the default theme provided by Magento. This is frowned upon because the default features provided in a previous version of Magento may not work on newer versions.</p> <p>But for the sake of ease, I choose to ignore this warning. So this is a simple guide that I use for quickly creating a Magento theme to dirty up from the default theme.</p> <ol style="list-style-type: none">Copy over the default frontend app design folder to the new_theme folder: <pre>cp -r /usr/local/www/magento/app/design/frontend/default/default /usr/local/www/magento/app/design/frontend/default/new_theme</pre> <ol style="list-style-type: none">Copy over the base default frontend skin folder: <pre>cp -r /usr/local/www/magento/skin/frontend/base/default /usr/local/www/magento/skin/frontend/default/new_theme</pre> <ol style="list-style-type: none">Login to the Magento admin panel, then System -> Design.Click on Add Design Change, then set the <u>Custom Design</u> to new_theme. | | | |
| <p>Now the images, CSS files, and various theme files in the app/design/frontend/default/new_theme and skin/frontend/default/new_theme folder can be changed.</p> | | | |
