Target version:	Kali 2	**Spent time:**	0.50 hour

Description

I recently tried to install the linux-headers package for Kali 2 in a VM, however I could not find the linux-headers package anywhere. It turns out that the default Kali repository does not include the headers package, and in order to install it the Kali archive repository.

- Add the kali-archive apt list:

```
echo 'deb http://http.kali.org/kali sana main non-free contrib' >> /etc/apt/sources.list.d/kali-archive.list
echo 'deb-src http://http.kali.org/kali sana main non-free contrib' >> /etc/apt/sources.list.d/kali-archive.list
```

- Update the repository cache and upgrade the system:

```
apt-get update && apt-get upgrade
```

- Install the headers package:

```
apt-get install linux-headers-$(uname -r)
```
