Target version:	Arch Linux	**Spent time:**	2.00 hours

Description

This is a guide on how I installed Google SketchUp on a 64-bit Arch Linux machine using PlayOnLinux.

Prepare the Environment

- Make sure the system is up to date:

```
sudo pacman -Syu
```

- Install playonlinux:

```
sudo pacman -S playonlinux
```

- Open **PlayOnLinux**

Configure SketchUp Virtual Drive

Install Wine 1.7.22

1. Start by going to Tools -> Manage Wine versions, then click on the Wine Versions (amd64) tab
2. Install the **1.7.22** version of wine, then close the wine manager window

Create Virtual Drive

1. Click on the Configure button.
2. Then click on the New button to create a new virtual drive, click Next to continue.
3. When the wizard opens up click Next, then select 64 bits windows installation, click Next to continue.
4. Select version **1.7.22**, and click Next to continue.
5. Name the virtual drive *GoogleSketchUp*, and click Next to continue.
6. Select the GoogleSketchUp virtual drive, then click on the Wine tab.
7. Click on Configure Wine.
    - In the Applications tab, select **Windows 7** from the Windows Version selection menu.
    - Then in the Libraries tab, select **riched20** library then **Add**, **Apply**, and **OK**.
8. Next click on the Install components tab and **Install vcrun2010**.
9. Close the virtual drive configuration window.

Install SketchUp

1. Download SketchUp
2. From PlayOnLinux, click on **Install a Program**
3. Then click on **Install a non-listen program**
4. When the wizard opens, click Next to continue.
5. Select **Edit or update an existing application**, and click Next to continue.
6. Check the **Show virtual drives** box, and then select the *GoogleSketchUp* virtual drive, and click Next to continue.
7. Click Next to skip additional Wine configurations.
8. Select **64 bits windows installation**, and click Next to continue.
9. Click **Browse** and navigate to the download path for the SketchUp setup executable.
10. Complete the SketchUp installer.

11. Select **SketchUp.exe** as the shortcut, and click <u>Next</u> to continue.
12. Name the shortcut *SketchUp*, then click <u>Next</u> to continue.
13. Click **I do not want to add another shortcut**, then click <u>Next</u> to continue.

NOTE: In order to get SketchUp to work, I needed to copy over the mfc100u.dll to the SketchUp application folder:

```
cd ~/.PlayOnLinux/wineprefix/GoogleSketchUp/drive_c/
cp windows/syswow64/mfc100u.dll Program\ Files\ \(x86\)/SketchUp/SketchUp\ 2016/
```

NOTE: I also needed to disable the Ruby API:

1. From PlayOnLinux, select **SketchUp** and click on <u>Configure</u>.
2. In the <u>Arguments</u> box, enter /DisableRubyAPI, then close the configuration window.
