Category:		Estimated time:	3.00 hours
Target version:	FreeBSD 10	Spent time:	3.00 hours

Description

This is a guide on how I compiled VIMAGE support into a custom FreeBSD 10.2 kernel.

Download the kernel sources

- Install subversion:

```
pkg install subversion
```

- Download the FreeBSD 10.2 kernel sources

```
svn checkout http://svn.freebsd.org/base/release/10.2.0/ /usr/src
```

Create a custom kernel config

- Change into the kernel source directory and create a new kernel

```
cd /usr/src/sys/amd64/conf  
cp GENERIC NEWKERNEL
```

- Edit the new kernel config file:

```
vi NEWKERNEL
```

- And add the following:

```
options      VIMAGE  
options      RACCT  
options      RCTL
```

Build and install the new kernel

- Change to the kernel source directory, then build and install the new kernel:

```
cd /usr/src  
make buildkernel KERNCONF=NEWKERNEL
```

```
make installkernel KERNCONF=NEWKERNEL
```

NOTE: This process took about 2 hours on the VM I used.
