Target version:	FreeBSD 10	Spent time:	1.00 hour

Description

This is a guide for setting up Zookeeper on FreeBSD 10.

Prepare the Environment

- Make sure the system is up to date:

```
pkg update && pkg upgrade
```

Install Zookeeper

- Install zookeeper:

```
pkg install zookeeper
```

- Set the machine id:

```
echo 1 > /var/db/zookeeper/myid
chown -R zookeeper:zookeeper /var/db/zookeeper
```

- Create a config from the sample config:

```
cp /usr/local/etc/zookeeper/zoo_sample.cfg /usr/local/etc/zookeeper/zoo.cfg
```

- Edit the zookeeper config:

```
vi /usr/local/etc/zookeeper/zoo.cfg
```

- And modify the config accordingly:

```
# The number of milliseconds of each tick
#tickTime=2000
# The number of ticks that the initial
# synchronization phase can take
#initLimit=10
# The number of ticks that can pass between
# sending a request and getting an acknowledgement
#syncLimit=5
# the directory where the snapshot is stored.
# do not use /tmp for storage, /tmp here is just
# example sakes.
dataDir=/var/db/zookeeper
```

```
# the port at which the clients will connect
clientPort=2181
#clientPortAddress=192.168.1.100

# specify all zookeeper servers
#server.1=192.168.1.101:2888:3888
#server.2=192.168.1.102:2888:3888
#server.3=192.168.1.103:2888:3888
```

- Start and enable zookeeper at boot:

```
echo 'zookeeper_enable="YES"' >> /etc/rc.conf
service zookeeper start
```
