Description

Michele encountered a problem with the coloring scheme which was impeding the work flow of normal transactions. The normal operation to change the color scheme in Quick Books is by going to **Edit -> Preferences -> Desktop View -> Color Scheme**. The problem in this case, was that the field for currently selected items was a color that was difficult to separate from the font color. The cause of this was found to be the Windows Theme overriding the QuickBooks color theme.

The Fix

Is as simple as **Right clicking on the Desktop -> Personalize -> Window Color -> Advanced Appearance Settings -> Item -> Selected Items**, from there an adequate color was chosen.

History

#1 - 11/27/2013 04:13 AM - Daniel Curtis

- Status changed from New to Closed

#2 - 01/07/2016 04:17 PM - Daniel Curtis

- Project changed from 18 to Windows Administration

- Category set to QuickBooks

- Target version set to Windows 7
