

GNet Solutions - Bug #31

Samba shares that are mounted are only read-only

01/16/2013 10:33 AM - Daniel Curtis

Status:	Closed	Start date:	01/16/2013
Priority:	Normal	Due date:	
Assignee:	Daniel Curtis	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:		Spent time:	1.00 hour
Description			
I would like users to be able to mount Samba shares and be able to read/write to the. I am able to mount			
<pre>mkdir /mnt/Share mount -t cifs -o username=user,password=pass,user,noauto //SambaServer/Share /mnt/Share</pre>			
Once navigated to the mounted directory, all files display. However editing, modifying, deleting, and creating files are impossible.			
<pre>ls -l of /mnt/</pre>			
Shows that /mnt/Share is owned by root with 755 permissions.			
<pre>sudo cp <file> /mnt/Share</pre>			
(Successful Write as root)

This task can be done by editing the /etc/fstab

```
//SambaServer/Share /mnt/Share cifs username=user,password=pass,user,noauto
```

Make sure to add the noauto and user options.

- noauto sets the share to not automatically mount at boot time.
- user allows users to mount the share

And now try to mount the share as the normal user.
