Target version:	FreeBSD 9	Spent time:	1.50 hour
Description I encountered a problem after upgrading my administration node. I upgraded my system using: <pre>pkg update && pkg upgrade</pre> The packages installed successfully, however when I go to restart nginx I receive an error: 2014/07/14 12:16:15 [alert] 55487#0: Unable to start the Phusion Passenger watchdog because it encountered the following error during startup: Unable to start the Phusion Passenger helper agent: it seems to have crashed during startup for an unknown reason, with exit code 1 (-1: Unknown error) The Fix It turns out that when I upgraded I did not lock the nginx package and the upgrade mucked up the passenger module. To fix this I needed to reinstall nginx with passenger compiled in, like so: <pre>portsnap fetch extract cd /usr/ports/www/rubygem-passenger make reinstall clean cd /usr/ports/www/nginx make config make reinstall clean</pre> NOTE: Make sure to enable the Passenger module when running make config when compiling nginx
