Category:	Virus Removal	Estimated time:	7.00 hours
Target version:		Spent time:	3.00 hours
Description			
<p>A fellow system administrator on Reddit released a script and collection of tools to automagically clean and repair many Windows based systems called Tron. This is a basic guide that I used to repair systems that have common infections.</p> <ul style="list-style-type: none">• Download the Tron package from here• Transfer the Tron.exe to a thumb drive• Press F8 while booting infected machine and select Safe Mode with Networking Support• Log in as Administrator and plug in the USB drive• Copy the Tron.exe to the desktop• Run the Tron.exe, after the files have been extracted open the tron folder• Click on <u>Start -> Run</u> and enter cmd and enter• Now drag and drop the Tron.bat into the black command screen then add -a to the end of the command, then press enter• Wait for the process to complete, this will take a long time depending on how fast the computer is and how much junk infested.
