

FreeBSD Administration - Bug #595

Starting php-fpm Causing Segmentation Fault on FreeBSD

04/11/2015 03:01 PM - Daniel Curtis

Status:	Closed	Start date:	04/11/2015
Priority:	High	Due date:

Category:	Web Server	Estimated time:	0.10 hour
Target version:	FreeBSD 9	Spent time:	1.50 hour

Description

I encountered an error while setting up an nginx web server using php-fpm for processing PHP.

- The error happened while starting php-fpm:

```
service php-fpm start
```

- *Example output*

```
Starting php_fpm.  
Segmentation fault  
/usr/local/etc/rc.d/php-fpm: WARNING: failed to start php_fpm
```

The Fix

As it turns out, this is a problem with certain PHP modules being loaded later than another; specifically the recode.so module was being loaded after the imap.so module.

- To fix this, edit the php extension configuration file:

```
vi /usr/local/etc/php/extensions.ini
```

- And move extension=recode.so above extension=imap.so

```
...  
extension=recode.so  
extension=imap.so  
...
```

- Now php-fpm will start:

```
service php-fpm start
```
