Description

I encountered an error with an LG N2R1D NAS when adding new drives. After I reinitialized a pair of 2TB drives, I found that I was unable to create any volumes on the 2TB drives. I checked the firmware version on the NAS to find it was version 2350; a really old version. So I went to upgrade the firmware, and this is where the 413 Entity Too Large error came up.

The problem was that I needed to have a volume initialized on the NAS so the firmware can be uploaded and processed for the upgrade. This can be found in Volume and click on **Apply**.

When the hard drive is initialized go back to Firmware -> Browse select the firmware version to upgrade, I chose the latest, and the click **Upgrade**
