| Target version: | FreeBSD 9 | Spent time: | 0.50 hour |
| Description | | | |
| Once in a while I will download a config file that contains ^M characters at the end of each line. This can easily be fixed using vi. | | | |
| <ul style="list-style-type: none">• Open the text file: | | | |
| <pre>vi ~/somefile.txt</pre> | | | |
| <ul style="list-style-type: none">• Then use the following command to delete all matches of ^M; make sure to use CTRL+V and CTRL+M to create the ^M character, or else nothing will happen: | | | |
| <pre>:%s/^M/</pre> | | | |
