

FreeBSD Administration - Bug #798

Problem With Jails and Unable to Find Template on FreeNAS

04/15/2016 09:16 AM - Daniel Curtis

Target version:	FreeNAS 9.x	Spent time:	1.50 hour

Description

I recently updated one of my FreeNAS 9.3 servers to 9.10 and for some reason I was unable to use FreeBSD 10.3 as the standard jail.

After looking online I found that someone had deleted the `.warden-template-standard` dataset to get their jail working again, so I went to the [Storage](#) section of the FreeNAS web interface and deleted the `.warden-template-standard` dataset.

- Once the `.warden-template-standard` was deleted, I tried to recreate a standard jail, but the creation failed with the error message:

```
Unable to find template
```

- I then went to the [Shell](#) and tried to recreate the standard jail:

```
warden template create -nick standard -tar http://download.freenas.org/jails/10/x64/freenas-standard-10.3-RELEASE.tgz
```

- Creating the jail failed because apparently warden still thinks the standard template still exists. I then tried to delete the standard template with warden:

```
warden template delete standard
```

- Unfortunately the template couldn't be deleted because warden was looking for the `.warden-template-standard` dataset, and that had been deleted earlier.

The Fix

- As it turns out, the utility that FreeNAS uses to manage jails also manages the ZFS datasets for the jails as well.
- In order to fix the problem I needed to recreate the `.warden-template-standard`:

```
zfs create zpool/jails/.warden-template-standard
```

- Then use warden to delete the standard template

```
warden template delete standard
```

- Then recreate the standard template:

```
warden template create -nick standard -tar http://download.freenas.org/jails/10/x64/freenas-standard-10.3-RELEASE.tgz
```
