Target version:	FreeBSD 10	Spent time:	1.50 hour

Description

This is a guide on setting up Zimbra 8.7 from source on FreeBSD 10.

WARNING: As of writing this guide ZCS 8.7 is still in beta and I will be pulling the latest code from Zimbra straight from the tap. Your mileage may vary.

Prepare the Environment

- Make sure the system is up to date and refresh the ports tree:

```
pkg update && pkg upgrade
portsnap fetch extract
```

- Install a few dependencies:

```
pkg install git screen bash
```

- Create a zimbra group:

```
pw add group zimbra
```

- Create a zimbra user:

```
pw add user -n zimbra -m -s /usr/local/bin/bash -c "Zimbra"
```

Build the Zimbra from source:

- Since downloading the source code takes a long time depending on the internet connection used, using screen or tmux will help:

```
screen
```

- Download the current release of Zimbra:

```
mkdir ~/git
cd ~/git
git clone -b judaspriest-foss https://git.zimbra.com/repos/zimbra-foss/.git
```

- **NOTE:** This took around 14GB of storage, so be forewarned.
- **NOTE:** Use CTRL+D and then D to detach the screen session.
