#### Description

This is a guide on synchronizing contacts and calendars on Android with an ownCloud instance.

#### Install DAVdroid

- Install [DAVdroid](#) from the Google Play Store or F-Droid.

#### Connect DAVdroid to ownCloud

- Open the DAVdroid app.
- When prompted to add a new account select **Login with URL and user name** and fill in the credentials accordingly:
  1. **Base URL:** <https://owncloud.example.com>
  2. **User name:** [user@example.com](mailto:user@example.com)
  3. **Password:** SuperSecretPassword
- Tap on **Create Account**
- Once the account is created, tap on the account and select which contacts and calendars to sync.

#### Syncing only with ownCloud

- Open the default **Calendar** app, then tap the **Menu** button and **Calendars to display**.
- Once the Calendar list appears tap on **Calendars to Sync** and select which accounts to sync with. In my case, I use only ownCloud and deselect any google accounts.
