| Description | | | |
| <p>This is a guide on removing the Factory Reset Protection form a Samsung Galaxy Tab E, model SM-T377V. This model was unable to use the conventional methods for bypassing the FRP such as the rootjunky method. To bypass FRP, I eventually had to work some ADB magic.</p> | | | |
| <ul style="list-style-type: none">• Make sure ADB is installed, on Arch Linux this is done with: | | | |
| <pre>sudo pacman -S android-tools</pre> | | | |
| <ul style="list-style-type: none">• Press and hold the Volume Down and Power buttons to boot into the maintenance mode.• Select Option 5 to enable ADB then press the Home Button to activate.• Reboot the device back into the initialization screen.• On the workstation with ADB installed run: | | | |
| <pre>adb shell content insert --uri content://settings/secure --bind name:s:user_setup_complete --bind value:s:1</pre> | | | |
| <ul style="list-style-type: none">◦ If that command does not work, then try: | | | |
| <pre>adb shell am start -n com.google.android.gsf.login/</pre> | | | |
| <ul style="list-style-type: none">◦ If THAT command does not work, then try: | | | |
| <pre>adb shell am start -n com.google.android.gsf.login.LoginActivity</pre> | | | |
| <ul style="list-style-type: none">• Once the command has been entered, try to sign into the device using a newly created Google account. The verification should pass without any further problem. | | | |
