Description

This is a guide for setting up a deluge-web seed box on Debian.

Prepare the Environment

- Make sure the system is up to date:

```
sudo apt update && sudo apt upgrade
```

Install Deluge

- Install deluge:

```
sudo apt install deluged deluge-web
```

- Edit the deluge defaults config:

```
sudo nano /etc/default/deluged
```

- And modify the following:

```
ENABLE_DELUGED=1
```

- Start and enable deluge at boot:

```
sudo systemctl enable deluged
sudo systemctl start deluged
```

- Create a deluge-web systemd unit:

```
sudo nano /etc/systemd/system/deluge-web.service
```

- And add the following:

```
[Unit]
Description=Deluge Web UI
After=deluged.service
```

```
[Service]
ExecStart=/usr/bin/deluge-web -d
```

```
[Install]
WantedBy=default.target
```

- Edit the deluge config:

```
sudo nano /var/lib/deluged/config/core.conf
```

- And modify the following:

```
"allow_remote": True,
```

- Start and enable deluge-web at boot:

```
sudo systemctl daemon-reload
sudo systemctl restart deluged
sudo systemctl enable deluge-web
sudo systemctl start deluge-web
```
