Description

I recently updated my Windows 10 workstation and tried to mount an old SMB share. I received the following error while mouning:

> You can't access this shared folder because your organization's security policies block unauthenticated guest access.

To fix this, right-click on the Start Menu icon and select **Windows PowerShell (Admin)** and enter the following commands:

```
Set-SmbClientConfiguration -EnableInsecureGuestLogons $true -Force
Set-SmbClientConfiguration -RequireSecuritySignature $false -Force
Set-SmbServerConfiguration -RequireSecuritySignature $false -Force
```
